Housing and neighborhood data for the Bronx paint a picture of vulnerability. Between 1990 and 2006, the Bronx saw the smallest increase in the City in its homeownership rate, and its rate remains the lowest in the City. The Bronx had the lowest rates of home purchase lending in 1996 and the second lowest in 2006. Yet it had the highest rate of notices of foreclosures in the City in 2006, with notices of foreclosure going up by more than 50% between 2005 and 2006. Bronx homebuyers were more likely than homebuyers in any other borough to receive subprime home purchase and refinance loans in 2000, 2005 and 2006.

There have been both encouraging and challenging trends for rental households in the Bronx. The Bronx saw the largest decrease in the percentage of severely crowded renter households of any borough, declining by almost 5 percentage points since 1990. Nevertheless, Bronx renters have the highest rent burden in the City along with the highest rate of serious housing code violations.

The Bronx has the largest percentage of households with children (41%) following a large increase during the '90s. Families in the Bronx face significant barriers to better income security and health status, however. The Bronx has had the highest poverty rate in the City since 1990. Rates of asthma hospitaliza-

tions and infant mortality in the Bronx also are the highest of the boroughs, and the Bronx has the highest rate of babies born with low birth weight. On the positive side, decreases in new diagnoses of elevated blood lead levels among children and school performance since the mid-90s have been significant.

Despite these challenges there are signs of increasing investment in the Bronx. Both the numbers of units authorized by new building permits and certificates of occupancy have increased since the early '90s. While vacant land decreased by half between 1990 and 2000, it has been relatively constant since then. In 2006, the Bronx had the second highest percent of vacant land in the City, revealing the potential for future investment in housing, infrastructure, or park land. Current investments in the Bronx that may have positive neighborhood impacts include the South Bronx Greenway, the Hunt's Point Rezoning, and significant new affordable housing developments in Melrose.

MOTT HAVEN / MELROSE – CD 101¹

Mott Haven/Melrose has seen dramatic rebuilding since 1990, when a full fifth of its land was vacant residential lots. By 2006, only 2% of the land remained vacant, the second lowest percentage of all CDs in the borough. Since 1990, CD 101 also has seen a rapid increase in property values, and a modest increase in the low rate of homeownership. Historically, CD 101 has experienced persistently low performance on social and health indicators. Compared to the rest of the City's neighborhoods, CD 101 has the highest rate of asthma hospitalizations and the greatest percentage of students performing below their grade level in math and reading. It has the second highest poverty rate (43%) in the City. Overall the population of CD 101 is young; it has among the lowest percentage of people over 65 and one of the City's highest percentages of households with children under 18.

Since 1990, CD 101 also has seen a rapid increase in property values, and a modest increase in the low rate of homeownership. Historically, CD 101 has experienced persistently low performance on social and health indicators. Compared to the rest of the City's neighborhoods, CD 101 has the highest rate of asthma hospitalizations and the greatest percentage of students performing below their grade level in math and reading. It has the second highest poverty rate (43%) in the City. Overall the population of CD 101 is young; it has among the lowest percentage of people over 65 and one of the City's highest percentages of households with children under 18.

² Ranked out of 32 community districts with the same predominant housing type (2-4 family buildings).

³ Price index should be treated with caution due to low number of observations.

* Not all data in the earliest column are from 1990. Please see Notes on page 17.

HUNTS POINT / LONGWOOD – CD 102¹

Hunts Point/Longwood and Mott Haven/Melrose share the same sub-borough area designation. The two have a very low homeownership rate, and CD 102 has experienced relatively slow increases in housing prices. Since 2000, the number of units authorized by new building permits has steadily increased. CDs 101 and 102 have the second highest rental vacancy rate (6%) in the borough, and the eighth highest in the City. CDs 101 and 102 also had the second highest percentage of rent-subsidized units in the City in 2005.

MORRISANIA / CROTONA – CD 103¹

In Morrisania/Crotona, as in other neighborhoods in the South Bronx, asthma hospitalizations and poverty rates are among the highest in the City. The CD has relatively few people

over the age of 65 and many households with children under 18. The percentages of children performing at or above grade level in reading and math in CD 103 are among the lowest in the City, but have shown substantial improvement since 1999. The rental vacancy rate in CD 103 is almost equal to that of the City, but the median monthly rent has increased more than in any other community district in the Bronx since 1990. In 2006, the median percentage of income spent on rent was almost 37%. Decreasing unemployment rates and an increasing number of units authorized by new building permits are signs of neighborhood improvement and investment since 2000.

* Not all data in the earliest column are from 1990. Please see Notes on page 17.

HIGHBRIDGE / CONCOURSE – CD 104¹

Highbridge/Concourse has seen a dramatic increase in home purchase lending since 1996, but much of the recent lending has been subprime, and the rate of notices of foreclosure dou-

bled between 2005 and 2006. The racial diversity index in CD 104 shows evidence of decreasing diversity in the neighborhood, potentially fueled by the 7 percentage point decrease in the black population between 1990 and 2006. The CD also has the third highest unemployment rate in the City, although the unemployment rate has varied widely since 1990, reaching a high of 18% unemployment in 2000, and a low of 11% in 2005. CD 104 is second from the bottom city-wide in school performance, but performance has improved significantly over the past 10 years. Improvements in the asthma hospitalization rate, which ranks second highest in the city in 2006, have been slow.

¹ Community district 104 matches sub-borough area 103.

² Ranked out of 32 community districts with the same predominant housing type (2-4 family buildings).

³ Price index should be treated with caution due to low number of observations.

* Not all data in the earliest column are from 1990. Please see Notes on page 17.

FORDHAM / UNIVERSITY HEIGHTS – CD 105¹

Home purchase lending has increased significantly in Fordham/University Heights since 2000. It has among the highest rates of subprime lending in the City; in 2006 nearly half all

home purchase loans and 41% of refinance loans were issued by subprime lenders. While the rental stock in CD 105 is among the City's least expensive and most rent-regulated, the rent burden is the highest in the City, and there is ample evidence of distress in renter households.

CD 105 has the highest rate of serious housing code violations of any neighborhood in the City, and the greatest percentage of severely crowded renter households in the Bronx. City-wide, CD 105 has the highest percentage of households with children, and one of the lowest percentages of seniors in its population. It also has the highest rate of unemployment in the City, and suffers one of the City's highest poverty rates.

BELMONT / EAST TREMONT – CD 106¹

Belmont/East Tremont has the highest poverty rate in the City at 44%, and almost half of all residents fall into the City's lowest income quintile. Since the '90s, there has been steady

and strong growth in housing prices and home purchase lending in CD 106. In 2005, however, subprime lending was seventh highest city-wide for home purchase loans and second for refinance loans. In 2006, CD 106 ranked 4th in the City for notices of foreclosure. There are significant signs of new development: housing stock has increased by 36% between 1990 and 2006 and the area's vacant land has decreased by nearly 13 percentage points, from 18% to 5% during that same time period. New building might have contributed to less crowding in CD 106; the percent of renters that are severely crowded dropped by almost 10 percentage points from a high of 12% in 2000 to under 3% in 2006.

¹ Community districts 103 and 106 both fall within sub-borough area 102. Data at the sub-borough area level for these two CDs are identical.

² Ranked out of 32 community districts with the same predominant housing type (2-4 family buildings).

* Not all data in the earliest column are from 1990. Please see Notes on page 17.

KINGSBRIDGE HEIGHTS / BEDFORD – CD 107¹

Kingsbridge Heights/Bedford is the most densely populated community district in the Bronx, and is home to the largest percentage of immigrants in the borough. Racial diversity in CD 107 has decreased since 1990, when it was among the most diverse CDs, largely due to an increase in the proportion of Hispanic residents and a corresponding drop in the percentage of white residents. In CD 107, rates of subprime lending are lower than the average rates for the borough but are still substantial. The unemployment rate in CD 107 has increased since 1990, and was the fifth highest in the City in 2006.

Kingsbridge Heights/Bedford is the most densely populated community district in the Bronx, and is home to the largest percentage of immigrants in the borough. RIVERDALE / FIELDSTON – CD 108¹

Of the 15 CDs in the City where sales of single-family homes are most prevalent, Riverdale/Fieldston has seen the greatest price appreciation since 2000. CD 108 has the lowest rate

of notices of foreclosures in the Bronx and maintains a homeownership rate close to the City average and almost 9 percentage points higher than the borough average. Although the median monthly rent in CD 108 is the highest in the Bronx, median income is second highest, and renters pay a smaller share of their income in rent than in the borough as a whole.

PARKCHESTER / SOUNDVIEW – CD 109¹

The unemployment rate in Parkchester/Soundview has declined steadily since 2000, but the poverty rate of 26% remains high relative to the city-wide rate. Rates of severe crowding have declined since 2000, as has the percentage of rental units that are vacant. The neighborhood has seen increases in certificates of occupancy and units authorized by new building permits since 2000, although a large percentage of the area remains vacant land. The demographic profile of the CD has changed since 1990 due to an increase in the percentage of immigrants, who made up nearly one third of the current residents in 2006.

THROGS NECK / CO-OP CITY – CD 110¹

Throgs Neck/Co-op City has the highest homeownership rate in the Bronx, more than 2.5 times the borough average. CD 110 also has the borough's second lowest rate of foreclosures.

Unlike the borough as a whole, which has more families and fewer seniors than the City average, CD 110 has the lowest percent of households in the Bronx with children under 18 and the second highest percent of residents over 65 in the City. The low poverty rate in CD 110 is one half of the city-wide rate and one-third of the rate in the Bronx. The homeownership rate in CD 110 increased by 18 percentage points between 1990 and 2006, and the CD had the 8th highest homeownership rate in 2006. The neighborhood has become more racially diverse since 1990, largely due to an influx of new Hispanic residents and a decrease in white residents.

MORRIS PARK / BRONXDALE – CD 111¹

Morris Park/Bronxdale had the largest number of units authorized by new building permits in the City in 2006, an important sign of new investment. The CD has experienced

large demographic shifts in the past 16 years: between 1990 and 2006, the percentage of white residents in CD 111 dropped by over 25 percentage points as the proportions of blacks, Hispanics, and Asians grew. Unemployment in CD 111 has remained stable between 1990 and 2006, despite declines in the unemployment rate in other CDs. The rate of asthma hospitalizations in 2006 is almost unchanged compared to 1994, although remains lower than the borough-wide rate.

WILLIAMSBRIDGE / BAYCHESTER – CD 112¹

In 2006, Williamsbridge/Baychester had the highest rate of home purchase loans in the Bronx and ranked eighth in the City. Many of these loans were subprime, however; CD 112 ranked fifth in the City for subprime home purchase loans and 6th in subprime refinance loans in 2006. CD 112 boasts the second highest homeownership rates in the Bronx and performs better on neighborhood quality indicators such as poverty, asthma, and school performance than most Bronx CDs.
